

**GENERAL
ASSEMBLY**

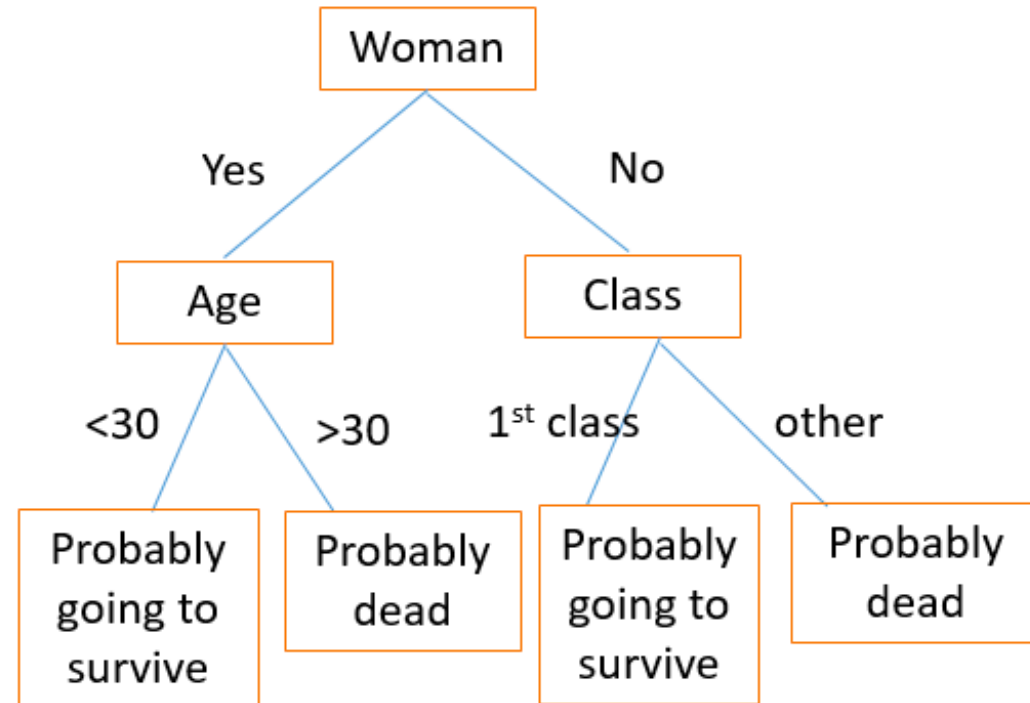

Visualizing Decision Trees

Ruze Richards

A normal tree

A decision tree

What We Will Do Today

- Download the notebook and data from here:

`git clone https://github.com/ruze00/ga_sample_teach.git`

- We will learn how to visualize a decision tree
- You will try it yourself with a different dataset

What You Should Have Installed

- anaconda 3 would be perfect, otherwise the following packages:

python 3
numpy
pandas
scikit-learn
jupyter

- Also (not part of anaconda, so we have to install these separately):

pip install graphviz or **conda install python-graphviz**
pip install pydotplus

- We also have to install the **graphviz** application separately:

(Mac) **brew install graphviz** or see download instructions below
(Linux) **sudo apt install graphviz** or see download instructions below
(Windows) see download instructions below

Download: <https://graphviz.gitlab.io/download/> and choose the installer for your system
